

477

478 **Fig. 3.** The data of the reproductive parameters (A–F) and fertility (G) in does having AFC ≤3 follicles (AFC I) and  
 479 with CL (CL+) (Group I), AFC ≤3 follicles (AFC II) and without CL (CL-) (Group II), AFC >3 follicles (AFC II)  
 480 and with CL (CL+) (Group III), and AFC >3 follicles (AFC II) and without CL (CL-) (Group IV) on their ovaries (n  
 481 = 128). Differences were considered statistically significant at  $p \leq 0.0500$ . AFC, antral follicle count; CL, corpora  
 482 lutea.
