

663

664 **Fig. 5 Antler velvet extract boosts the cytotoxic activity of Natural killer (NK) cells.** To assess this

665 activity, an LDH assay was conducted by coculturing NK cells with (A) YAC-1 lymphoma cells and (B)

666 quiescent Raw264.7 mast cells. To maintain the baseline activity of Raw 264.7 cells, no stimuli were

667 introduced during the culture. All values are expressed as mean \pm SD; significant differences were

668 determined using Student's t-test and ANOVA at *** $p < 0.001$ and **** $p < 0.0001$.
