

514

515 Fig. 4. Correlations between plasma Anti-Müllerian Hormone (AMH) concentration and number of
 516 follicles, collected oocytes, embryo quantity, and transferable embryo rate. (A) Correlation between
 517 total follicle count and plasma AMH concentration ($R^2=0.5185$, $p < 0.0001$). (B) Correlation between
 518 total oocytes retrieved and AMH concentration in plasma ($R^2=0.6857$, $p < 0.0001$). (C) Correlation
 519 between total number of transferable embryos and AMH concentration in plasma ($R^2=0.4049$, $p <$
 520 0.0001). (D) Correlation between transferable embryo rate and AMH concentration in plasma
 521 ($R^2=0.1476$, $p = 0.5225$)
