

346 Table 4. Effects of different flattening rates on welfare quality scores and assessment

Welfare principles assessment		0%	20%	30%	40%	50%	<i>p</i> value
<b>Good feeding</b>	Socre min	100	100	100	100	100	0.001
	Socre max	100	100	100	100	100	
	Std.deviation	0	0	0	0	0	
<b>Good housing</b>	Socre min	78	87	89	94	96	0.157
	Socre max	100	100	100	100	100	
	Std.deviation	13.9	7.98	6.75	3.48	2.13	
<b>Good health</b>	Socre min	75	96	95	96	94	0.076
	Socre max	100	100	98	99	98	
	Std.deviation	13.46	2.19	2.02	1.77	2.25	
<b>Appropriate behavior</b>	Socre min	10	15	18	19	19	0.240
	Socre max	10	15	22	39	49	
	Std.deviation	0	0	2.83	14.14	21.21	

\*n.a not assessed. <sup>a-d</sup> Means with different superscripts in the same column differ significantly ( $p < 0.05$ )
