

496
 497 **Fig. 2.** Relative quantification of *IL-12β* and *IFN-γ* in the spleen of laying hens fed a basal diet supplemented with
 498 gamma-oryzanol and vitamin E tocotrienols as antioxidants during 54-62 weeks of age. Diets were divided into 4
 499 groups: CON, a basal diet without supplementation; GO, a basal diet supplemented with 200 ppm gamma-oryzanol;
 500 VE, a basal diet supplemented with 200 ppm vitamin E tocotrienols; GO + VE, a basal diet supplemented with 200
 501 ppm gamma-oryzanol + 200 ppm vitamin E tocotrienols. ^{ab}Mean values with different small letters denote
 502 significant differences among experimental groups ($P < 0.05$). Animals were reared in different cage densities: LSD,
 503 low stocking density (840 cm²/bird); HSD, high stocking density (420 cm²/bird).
